

Albert - Ques. 2 - Assign. 3

ANO2	Level 4	Level 3	Level 2	Level 1
communication	concerning to add to understanding, input one concerned another	Howchart organized, proper spacing, correct symbols, proper language Comments - useful succinct, (black OK), not excessive black at top (modification - start date, for status, some problem - solution, Notes etc.) Line space user interface, clear language, no grammar or spelling errors IO - proper chart (headings), steps, proper terminology C - replicate and man - word appropriate standard size Trace step-use changes (Table) All functions (including users are consistent and work as expected) Code efficiency - nested if's better into function calls	Poor spacing, some incorrect symbols, typing errors lacking explanation, inline comments, or hard to read or spelling mistakes on output or programmer messing or modifications Adequate 2 or 3 grammar or spelling errors IO opens and closes properly but may be inefficient CHT may be skipping certain lines/words Unclear steps or incorrect terminology Small graphics, features not intuitive Variable names don't match or missed a step Functions work, but confusing or inefficient Nested if's or lack of proper loops - does not take advantage of built-in functions	poor organization, many symbols used incorrectly for the concept attempting to convey, arrows in the wrong section or incorrect pointer Any two or more details missing or Omissions/overlooked work not acknowledged CHT more than 25% of code borrowed Needs improvement User interface not clear, poor language and or spelling and grammar errors hard coded words and forgot to close files missing information in columns or steps missing No graphics, just console that user would not necessarily have first count on number of guesses more confusing - replicate the existing error, or do not recognize it Hard coded where a user defined function or built in would suffice No functions or classes
Knowledge Thinking & enquiry	With open or similar more advanced coding Description at top to clarify			
Thinking & enquiry	Screen sizes to user systems Make it interactive Colour or design helps user know what stage they are at			
Application	Could be class based Highly efficient, best possible, perhaps looked a new fun but or way to complete the app			

Comments - Had to fix your Paths + add an import
so it would not be interpreted as a tab. Please
refer to my comments, inline - Howchart - Generate the
Secret word is reading from a file = Input - similarly
Display wn... = Output
