

# ## Rick Ques 2 Assign 3 ##

A302	Level 4	Level 3	Level 2	Level 1
communication	colouring to add to understanding, input one colour/shape another	Flowchart - organized, proper spacing, correct symbols, proper language  Comments - useful succinct, block < > < >, not sparse, block at top (modification) not date, programmer name, problem < > Notes on anything special or unusual Readability - code is easy to read white space	Poor spacing, some incorrect symbols, typing errors	poor organizations, many symbols used incorrectly for the concept attempting to convey, arrows in the wrong section or incorrect pointer.
	Excellent: User instructions that are clear and can be accessed at any time or Additional options, like premature quit.	user interface - clear language, no grammar or spelling errors IPO either CSV or txt - Open and close reading of all elements in the file and array/list/class	Adequate	Any two or more details missing or Citations/borrowed work not acknowledged OR more than 25% of code borrowed
Knowledge Thinking & inquiry	With open or similar more advanced coding	IPO - proper chart (headings), steps, proper terminology	2 or 3 grammar or spelling errors	Needs improvement
Thinking & inquiry	Description at top to clarify	Graphics are appropriate and professional looking for Hangman - word list appropriate components - Standard screen size 1280 x 1024 Trace statements - variable name, steps and changes (Table/chart) All functions (including user) are efficient and work as expected	Unclear steps or incorrect terminology	User interface not clear, poor language and or spelling and grammar errors hard coded words and forgot to close files missing information in columns or steps missing
Application	Could be class based Highly efficient, best possible, perhaps found a new function or way to complete the task	Code efficiency - nested if's better into function or class	Small graphics, features not intuitive. Variable names don't match or missed a step Functions work, but confusing or inefficient Nested if's or lack of proper loops - does not take advantage of built in functions	No graphics, just console that user would not necessarily have. Lost count on number of guesses more confusing, complicate the existing error, or do not recognize it. Hard coded where a user defined function or built in would suffice
				No functions or classes

Interesting - I correctly guessed sound card, but lost because I entered 'd' twice. Not exactly as it should work. Letter entry on user interface would improve. This can only be run by someone with an IDE.  
Nice game however - Good Work.  
I/O should always be error checked.
